Detailing of Gaprito Launching Literature

Dear Sir,

In your daily practice, you see many patients suffering from dyspepsia and GI motility disorders. Considering the clinical situation, you may prefer a gastroprokinetic agent like domperidone.

Domperidone is a good drug, but it has some limitations, such as concerns regarding **QT prolongation, serious ventricular arrhythmias, and certain CNS-related complications.**

Am I right, Sir?

Today, I have come to present a molecule that offers **faster and better symptomatic relief than domperidone**, with a favorable safety profile regarding these concerns.

Would that be a better option for your patients, Sir?

Yes.

Considering these needs, **Novatek Pharma introduces Gaprito (G-A-P-R-I-T-O),** a preparation of the modern gastroprokinetic agent **Itopride HCl.**

Our brand slogan is:

"Dual Action, Smooth Digestion."

[Show the literature here]

Dear Sir,

In this visual, we can see the molecular structure of the gastroprokinetic agent **Itopride HCl**.

Itopride offers a **dual mechanism of action** that enhances GI motility and promotes gastric emptying. Its favorable cardiac and CNS safety profile provides important advantages, particularly regarding **QT-prolongation and CNS-related concerns associated with some other prokinetic agents.**

Here you can see that **Gaprito works through a distinctive dual mechanism of action.** Itopride antagonizes peripheral **dopamine D_2 receptors** and inhibits **acetylcholinesterase**. These complementary actions increase cholinergic activity and support gastrointestinal motility.

Additionally, Gaprito provides an **antiemetic effect through its dopaminergic action at the CTZ.**

So, we can say that **Gaprito provides an effective treatment option for appropriate patients with GI motility-related symptoms.**

What do you think, Sir? Could it benefit your patients?

[Efficacy Comparison]

Sir, here in a randomized study comparing **Itopride 50 mg three times daily** with **Domperidone 10 mg three times daily**, moderate-to-complete symptomatic relief was reported in **81% of Itopride-treated patients versus 70% of Domperidone-treated patients after two weeks.**

Along with its efficacy, Itopride was reported to start working within **48 minutes**, compared with **over 72 minutes for Domperidone.**

Therefore, **Gaprito helps provide digestive comfort faster and more effectively.**

[GERD + PPI Visual]

Sir, here in this study, we can see that GERD symptoms such as **heartburn, regurgitation, and burning in esophagus** can be better managed by adding **Gaprito 50** to proton pump inhibitor therapy in appropriate patients.

So, we can say that **Gaprito provides effective add-on therapy with PPIs for improved GERD symptom management.**

[Safety & Pharmacological Advantages]

Moreover, Sir,

Gaprito acts on the **Chemoreceptor Trigger Zone (CTZ)** to provide an antiemetic effect.

Gaprito has a **favorable cardiac safety profile regarding QT-prolongation concerns.**

Gaprito has **limited penetration across the blood-brain barrier**, resulting in a lower potential for CNS-related adverse effects.

Gaprito is primarily metabolized through the **flavin-containing monooxygenase (FMO) pathway**, which reduces the potential for CYP-mediated drug–drug interactions.

[Fourth Page – Key Benefits

So, Sir, we can summarize Gaprito in five key points:

- **Gaprito shows Dual Action** that enhances gastric motility for smoother digestion.
- **Gaprito is a Powerful Prokinetic** that promotes faster and smoother gastric movement.
- **Gaprito is Fast & Effective,** with a faster onset of action and greater efficacy than domperidone.
- **Gaprito Works Better with PPIs,** providing effective add-on therapy for improved GERD management.
- **Gaprito Shows Proven Tolerability,** with a favorable safety and tolerability profile for up to 52 weeks.

[Indications & Dosage]

Here are the **at-a-glance indications of Gaprito.**

Gaprito can be taken **three times daily, preferably before meals, as clinically appropriate**, to achieve the desired therapeutic response.

[Closing]

Dear Sir,

Considering all these benefits, may I expect your valuable prescriptions in favor of **Gaprito** for appropriate patients? Your prescriptions will help us establish Gaprito in my territory.

Thank you for your valuable time, Sir.

On my next visit, I would be pleased to hear about **your experience with Gaprito and your patients' feedback.**

Thank you again, Sir.
